Manitou

## Verify Panel User Number

This document details the purpose and use of the Verify Open/Close user option available on the Manitou customer Options.

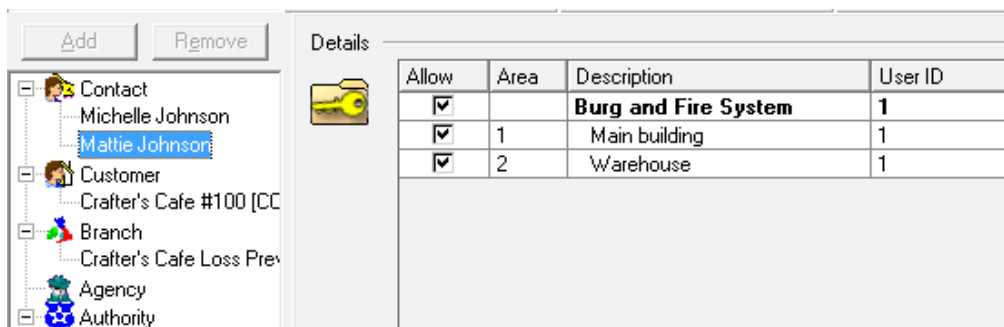

Within the Options section of the Customer Options on the Customer form the Verify Panel User Number is a check box that may be selected. What this does is tells the Manitou Signal Handler to check against the Contact List User IDs for a matching number.

When there is NOT a matching user ID to a person on the Contact List that matches when an Open or Close event arrives, the Signal Handler presents an Unauthorized Open or Close event to an operator who can then take appropriate action.

Additional Information

• The most common use of this feature is for when a person is let go at the end of a work day and a technician may not be able to be able to reprogram the control panel at the location for hours or even days. This allows for protection of the site even when the panel cannot be immediately reprogrammed.
