

Manitou FAQ

"I received a Late to Close after the site was armed."

Q: What is happening when I receive a Late to Close and when I check, the site is Armed?

A: Many times the Open/Close schedule is monitored on a different area than the area that armed.

The below image shows that the Open/Close schedule is being monitored on Area 1, and it is currently disarmed. When the Open/Close schedule reaches its "Must Close" time the system generates a Late to Close for Area 1.

Additional Notes:

- The "All Access" on an area means that no arm or disarm of the area will trigger an exception.
