Manitou

Vocabulary

This document details some of the specific vocabulary used in Manitou alarm monitoring software.

Term	Definition
Contact Points	Any path that allows contact to a customer or person such as Email, phone, fax, etc.
General Schedules	A list of days, dates, and/or times to enable an item. These are used on phone numbers, call lists, and even programming.
Open/Close Schedules	Days of the Week and Times of the Day that persons are allowed to come and go at a site. This can be monitored or not.
Group/Class Codes	A code used to group, or classify, a customer record often used for reporting. These are individually configured at each monitoring center.
Monitoring Group	A subdivision of accounts to segregate who may handle those alarms.
Event Monitoring	Alarms presented to operators through traditional communication paths that do not have any specific specialization.
Access Control	Alarms presented based on integrated access control within Manitou.
GPS Tracking	Systems which present events that include GPS coordinates.
Other (systems)	Systems monitored , or not, that do not fit in the other categories.
Transmitter Type	Default programming used to translate signals.
Transmitter ID (TXID)	The communicator ID of the signaling equipment.
Area	A partition of the pane that indicates a portion of the entire system.
Zone	A place within an area that represents detecting equipment such as a motion detector, door contact, smoke detector, etc.
Programming	Signal Translations.
Entity	An organization or business with access to a site. For example: Authorities, Agencies, Branches, or Dealers/Installers. Entities may include the Customer record itself as opposed to the people with access to the site.

Additional Notes:

This is not an exhaustive list of vocabulary for Manitou. This provides the terms, from the customer record, that most often require further definition.
