

Creating Custom Alarm Screens

The following directions step through how to create custom alarm screens for your event categories.

Instructions:

1. Open the Settings Icon in the Manitou Web client.
2. Click the Plus icon on the Customizable Alarm Screens Card
3. Enter a Description. (Required field)
4. Choose the Event Category to customize.
5. Add the number of columns and rows needed for the form.
6. Merge together each pair of cells to configure the page to your desired view. (Click 2 cells then click Merge.)

Customizable Alarm Screens

7. Click Done.
8. Click the cog icon, on the upper right-hand corner of each card.
9. Select what should reside there.
10. Click Done
11. Repeat steps 8-10 for all cards.
 - Please note, there are two required fields:
 - Action Pattern
 - Alarm Details
12. Click Save icon.

Additional Notes:

- There is a Global Permission for this feature found under the Administration section and it is called "Alarm Screens."
- The Event Category custom alarm screen effects ALL alarms within that category.
- 3X3 is a good starting columns and rows.
- If you need more cells to attach to the bottom of what you created you can do so AFTER your first save.
- It is a good practice to include:
 - Customer Details
 - Customer Status
 - Activity Log
- There are permissions to restrict access to this by User Group. The Permission setting is found: SWS - Maintenance - Setup - Permissions - Administrative - Alarm Screens
- Always TEST when customizing Alarm Screens to ensure it is the correct solution.
