

## Managing Priority Bucket Sounds

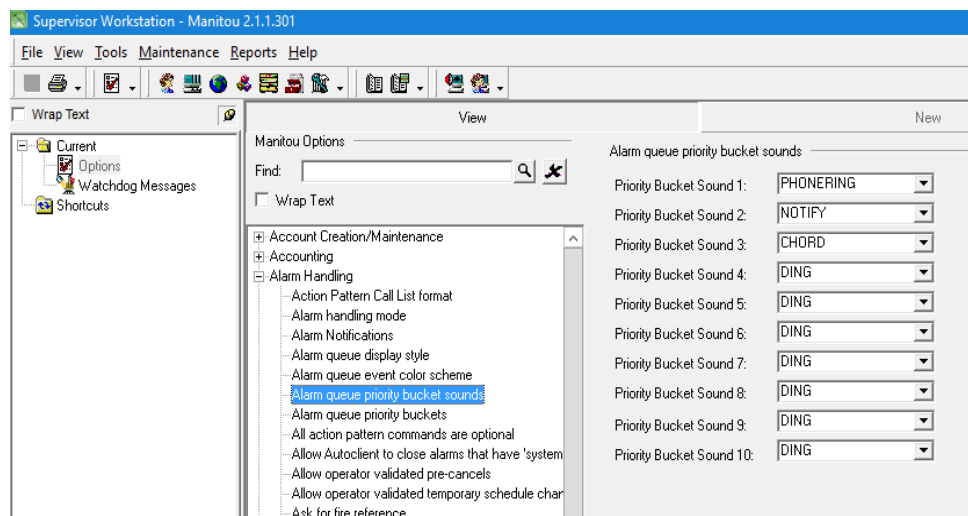

Manitou Event codes can be organized into Priority Buckets. Each of those buckets can then be assigned different sounds. This allows the audible sounds to clearly define the higher priority events.

### Instructions:

1. Open the Supervisor Workstation and navigate to the Options page.
2. Open the Alarm Handling section.
3. Select the Alarm Priority Bucket sounds option.
4. Edit the form.
5. Set the appropriate sound to each priority bucket\*.
6. Click Save.

### Additional Notes:

- \* It is possible to add additional, customized, sounds through the Supervisor Workstation - Integrations form.
