

# Accessing Plans During an Alarm

Plans are available when processing alarms. When "SHOW PLANS" is added to the action pattern the plan will load from the action. If the action pattern doesn't contain an action step, it is still possible to view the plan from the Action pattern section.

- When clicked the plan expands below the action pattern and above the activity log.

- The Area and Zone tripped flash on screen.
- It is possible to review other plan layers by clicking the layer icon located on the top left of the plan.
- When linked, it is possible to directly access devices from the plan.
