

# CanCancel

The **CanCancel** programming command Enables an event may be canceled by the Manitou Signal Handler when a canceling event arrives within the timeout period. **This does not function without the Cancel() option on the canceling event code.**

## Command Parameters

- **Event** - What event cancels the initial alarm.
  - **Zone** - Which zone the canceling event exists.
  - **Timeout** - Time, in seconds, that the initial event waits for the canceling event.
  - **Abort** - Should the Signal Handler change the initial event from an Alarm to a Signal. On = Yes, change to a signal. Off = mark as canceled but do not change the alarm to a signal.
-
