

Logs

Manitou contains a number of log files that assist users in tracking activity and processes within the system.

- **System Log** - Tracks, edits made to any record in Manitou, user login and log out, report server success and failures, and most system communications.
 - **Raw Data Log** - lists the unadulterated signals coming through the Manitou Front End Processor (FEP).
 - **System Application Log** - Found in the Supervisor Workstation shows communications between Manitou Services and the Manitou Database.
-
