DNIS Maps

The **DNIS Maps** Master File report returns a listing of **DNIS** values and to which dealer they are assigned.

> **DNIS** (Dialed Number Identification Service) is a feature that identifies the specific phone number dialed by a caller, allowing businesses to route calls based on the number dialed. **DNIS maps** are configurations that match specific dialed numbers to predetermined actions or destinations, helping to efficiently manage incoming call routing.

Report Parameters

- **MonGrp** (Monitoring Group) - Filters the report results to those within the specified Monitoring Group(s).
- **Dealer ID** - Filters the report results to the dealer, or dealers, selected.
- **Receiver Line Prefix** - Returns the values for the prefix, or prefixes, selected.
