Creating Main and Sub-accounts

Last Modified on 10/31/2023 11:25 am EDT

This article details how to create Main and Sub-Accounts and link signals through the Main to the Sub-account.

Important Notes:

- All signal processing happens on the MAIN account.
- It is possible to program Late to Close, Late to Open, and a few other System Generated events on the Sub-accounts.
- The Transmitter Linking form only appears when there is a Main/sub-account relationship or greater than one System.
- It is possible to wild card the Area and Zone information within the Output section, provided the Event Category is listed.
- Always TEST your changes!!

Main Account

1. Load, or Create the Main Customer Account
2. Edit the record and ensure the Account Type reads Main Account.
3. Save the record.

Sub Account

1. Load, or Create the Sub-account Customer
2. Edit the record and ensure the Account Type reads Sub.
3. Link the Sub-account to the Main Account record.
4. Go to the Systems form and ADD a System with a "dummy" transmitter.
5. Save the record.

Transmitter Linking - Transmitter linking occurs on the Main account.

1. Load the Systems form

2. Enter any signal translation programming necessary, on the programming form.
3. Load the Transmitter Linking form.
4. Enter the Transmitter, Area, Zone, and Event Category, when necessary, into the Output section of the Transmitter Linking form.
5. Within the Redirect section of the Transmitter Linking
    a. Select the Sub-account that should receive the “pushed” signal.
    b. Select the Sub-system
    c. Enter an equal (=) sign within the Area and Zone columns if the same information should be displayed on the Sub-account. If not, enter the new Area and/or Zone information.
6. Save the record.
