

New Customer Systems - Areas and Sectors - Access Control

After entering the transmitter(s), you can add Areas and Sectors. This is very similar to the Areas and Zones for the Event Monitoring systems, sectors replace zones and relate directly to the access control system.

The screenshot shows a software interface titled "Add System" with a subtitle "4 - Access Control Example". At the top, a horizontal progress bar contains six steps: "SYSTEM", "TXS", "AREAS & SECTORS" (which is highlighted with a blue dot and a blue box), "PROGRAMMING", "DEVICES", and "REMINDERS". Below the progress bar, the interface is divided into two main sections. The first section is labeled "Areas" and contains an "ADD" button. The second section is labeled "Sectors" and also contains an "ADD" button. At the bottom right of the interface, there are three buttons: "CANCEL", "PREVIOUS", and "NEXT".

Areas

Areas as they relate to Access Control like they are in Event Monitoring, represent a physical area at the location protected by the access control system.

Adding an area

- Click **Add**.
- Enter the **Area** number.
- Enter the **Description** of the protected Area name.

Schedules are created after the new customer and would not be available to link at this point.

Sectors

Sectors, much like Zones, are the more specific locations within an access control system such as a door or access point.

Adding Sectors

- Enter the numeric value of the Sector.
- Enter the Description.
- Repeat as required.

When the Areas and Sectors are entered as expected, click **Next**.
