# Receiver Availability

The **Receiver Availability** report returns the up-time for the receivers. This is often provided to a **UL** Inspector.

Report Parameters

- **Date** - time range to include in the report results.
- **Dealer ID** - dealer, or dealers, to include in the report.
- **Authority ID** - authority, or authorities, to include in the report results.
- **Transmitter Type** - filters the results by the specified Transmitter Type(s).
- **Receiver Line** - filters the results by the specified Receiver Line(s).

- **Primary Path Zones** - allows manual entry of the path zone(s) to include. This is a comma-separated list.
- **Secondary Path Zones** - allows the manual entry of the secondary path zone(s) to include. This is a comma-separated list.
- **Primary Receiver Number** - allows the selection of which receiver to include with the path zones.

- **Backup Receiver Number** - notes the receiver that backs up the primary receiver.
- **Minimum Customer Availability %** - sets the minimum availability time percentage to include in the results.

- **Include Signal Details** - returns detailed signal information within the report results.
