

# PSAPLkup(Service Type)

The **PSAPLkup(Service Type)** command determines what service to use to look up the appropriate PSAP (Public Safety Answering Point) based on the alarm. Generally used in conjunction with GPS services.

This command requires a service purchase and licensing for the PSAP lookup.

## Command Parameters

- **Service Type** - Selects the service the event uses to look up the PSAP based on the GPS location of the alarm.
-
