# Zone or Point ID Assignment

Manitou has a specific set of instructions for finding the **Zone** or **Point ID description** that displays to alarm operators and within the customer activity log.

- If the **Point ID** Description within the Customer Transmitter Programming <u>exists</u>:
  - Manitou assigns the **Point ID** associated with that event.
    - If there is <u>no associated Point ID</u> in the Customer Transmitter Programming
      - Manitou looks at the **Customer Zones** to find the description that matches the event zone.
- If the **Point ID** Description within the Customer Transmitter Programming <u>does NOT exist</u> and <u>DOES exist in the assigned Transmitter type</u>:
  - Manitou presents the description found in the **Customer Zones**
    - If there is <u>no description in the Customer Zones</u>.
      - Manitou presents the **Point ID** of the event in the **Transmitter Type** form
- If the **Point ID** Description Programming <u>does NOT exist either at the Customer or Transmitter programming</u>.
  - Manitou returns the zone description on the **Customer Zones** form, if it exists.
