

Action Handling - Include

The **Action Handling Include** command allows the inclusion of other action patterns within an Action Pattern.

The screenshot shows a configuration window titled "Action Handling" with a dropdown arrow. The window is divided into two main sections. The top section is a list of action types: "Wait", "Include", "Jump To", and "Label". The "Include" option is selected. Below this list is a section titled "Add Line 1" which contains two checkboxes: "Auto Run" and "Locked", both of which are currently unchecked. Underneath the checkboxes are three radio buttons for selecting a category: "Customer" (which is selected), "Dealer", and "Company". Below the radio buttons is a "Category" dropdown menu currently set to "Default". A search bar with a magnifying glass icon is located below the dropdown. At the bottom of the search bar is a table with two columns: "Code" and "Description". The table is currently empty and displays the text "No Results". At the bottom right of the window are two buttons: "CLEAR" and "APPLY".

Action Patterns may be selected from the **Customer**, **Dealer**, and **Monitoring Company** records.
