

Action Handling - Label and Jump To

The **Action Handling Label** action identifies a location in an action pattern to which the **Action Handling Jump To** action is used to go to that point in the action pattern. While the Jump To is listed before the Label under Action Handling, the *Label is required for the Jump To to function*.

The image displays two screenshots of a software configuration interface for Action Handling. Both screenshots show a blue header bar with the text "Action Handling" and a downward-pointing arrow. Below the header, there is a list of action types: "Wait", "Include", "Jump To", and "Label".

The top screenshot shows "Add Line 1" with a "Name" field containing the text "CALLS".

The bottom screenshot shows "Add Line 2" with a "Jump To" dropdown menu containing the text "CALLS". To the right of the dropdown are two checkboxes: "Auto Run" and "Locked", both of which are currently unchecked.
