

Data Handling - Launch

The **Data Handling Launch** command allows the connection of linked software systems configured in Manitou. These connections are managed within the Supervisor Workstation.

The screenshot shows a software interface titled "Data Handling" with a blue header bar. Below the header, there is a list of actions: "Launch", "Show", "Attention", "Prompt", "Set", and "Remark". Below this list, there is a section for "Add Line 2" which includes two checkboxes: "Auto Run" and "Locked". Below the checkboxes, there are two dropdown menus: "External Application" and "Program". A red error message "This field is required." is displayed below the "Program" dropdown menu.

A common use for this is when an operator determines that the account requires service and is connected to an Accounting application where they can create a service ticket.
