

Data Handling - Remark

The **Data Handling Remark** command is used to note specifics about the action pattern.

Please note, using this before automated actions will **disable** the Auto Client's ability to process automatic actions. Also, the Remark is a value that is not visible to the alarm operator during alarm processing.

The screenshot shows a software window titled "Data Handling" with a blue header bar. The main area is a list of options: "Launch", "Show", "Attention", "Prompt", "Set", and "Remark". The "Remark" option is selected. Below the list is a section labeled "Add Line 2" with two checkboxes: "Auto Run" and "Locked", both of which are unchecked. At the bottom, there is a text input field labeled "Remark" which is currently empty. A red error message "This field is required." is displayed below the input field.

Enter the specific information for the remark.
