Data Handling - Enhanced Script
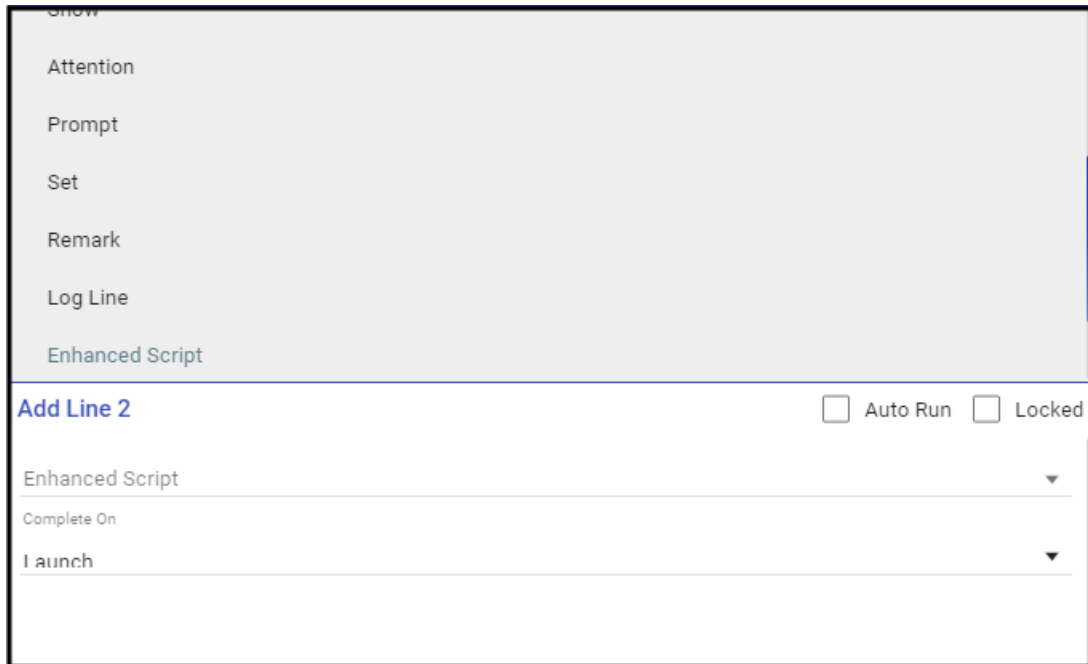

The **Data Handling Enhanced Script** command allows the selection of any Operator scripts created within the Enhanced Scripts form. These are used to collect information in a single location, as opposed to Prompts which are one item at a time.

- **Enhanced Script** - Drops down the available scripts to include.
- **Complete On** - Determines if the script is considered completed on Launch or Submit.
  - **Launch** - Completes when the operator launches it for completion.
  - **Submit** - Completes only when the operator completes the details and clicks submit.
