# Tools Menu

The Manitou **Tools** menu contains access to features that help users accomplish tasks.

- **System Log** - The System Log provides a listing of actions taken related to numerous features including: user login/log out, password failures, report details, manual signals sent, user messages, and more.
- **Raw Data Log** - The Raw Data log provides access to the raw event codes sent into Manitou and where they landed.
- **Manual Signal** - Allows users to send manual signals for testing or resetting account items after verifying the site is clear.
- **Change Customer ID** - Allows users to change customer record IDs when required to do so.
- **Verify Password** - Opens a dialog that allows a user to verify a password for any entity.
- **Dealer Takeover** - Allows the assignment of all a dealer's customer records to be managed by a different Dealer.
- **PSAP Lookup Tool** - Looks up the PSAP (Public Safety Answering Point) values defined in Manitou. This requires licensing for Location Services to function.
