

Language Utility - Prepare for Translations

After connecting to the Language Utility, it is most useful to export the items to a file so that you may use external tools such as text editors or Excel to find and replace values.

1. Log in to the Utility.
2. Connect to the Database.
3. Select the Language.
4. Click Export.
5. Save the File.
6. Open an editor and make the language replacements.

When completed, save the file as a .txt file with the same data in the same order. Then prepare it for [importing back into the utility](#).
