# Manitou Linking to SedonaOffice

When sites integrate with the SedonaOffice accounting system, there are a few things to understand.

SedonaOffice contains Customer, Site, and System values that Manitou links to the Site and System levels as Manitou Customer and Manitou System Transmitter IDs.

Manitou and SedonaOffice Relationships

Manitou	SedonaOffice
	Customer
Customer ID for the SITE Address	Site
System (via primary Transmitter ID within the System(s))	System

SedonaOffice & Manitou Relationships

GSM
Rcv/Line 1B
Panel ID 8779

Manitou

For those sites linking their Manitou system in a bulk fashion, they will use the **SedonaLinker**. Within the SedonaLinker, there are three options.

1. **Site to Site number** - Manitou Customer ID 1234 = SITE Number in SedonaOffice 1234 (CS Linking).
2. **Single System Alarm Account** - System ID = TX ID in Manitou.
3. **System Alarm Account** - System Record in SedonaOffice (Alarm SYSTEM Account = Manitou Customer ID).

Your Manitou support team will help guide you through which process will work best for you when deploying and

verifying the data using the SedonaLinker.
