Contact	info@soteriamobile.com

Soteria Mobile helps Manitou central stations and SOCs extend monitoring beyond the premises — protecting people, not just property. BShield turns any smartphone or smartwatch into a monitored safety device, with signals routing straight into Manitou as a new recurring-revenue service, no new hardware required.

Subscribers get real-time protection wherever they go, while your operators get the location and context they need to dispatch the right response, all within the Manitou environment they already use every day.

BShield Mobile App

- **Emergency**, **Man Down**, and **Pin Drop** — GPS alerts to the central station
- **Lone Worker** — timed check-ins with overdue alerts
- **Breadcrumbs** — continuous location tracking
- **Photo & Message Sending**, **Daily Check-In**, and **Centralized Management**

Packet Parse Utility

- **Universal compatibility** — TCP signals to XML for most automation platforms
- **Built-in redundancy** — automatic server failover
- **Signal Locator** and **blacklisting** of unwanted traffic
