

SIMS Xfer Update

To disconnect your SIMS Xfer program from connecting to the SIMS Xfer Hosted Server, you will apply the following steps to any SIMS Xfer program that is at your Central Station.

1. On the SIMS Xfer program, click on View>Show/Hide Settings Tabs.

2. Click on the Configuration tab.

3. In the FTP Server section, uncheck Use Default FTP Server>uncheck Passive FTP>click Save.

Once this has been done, then it will still save locally to C:\Program Files (x86)\SIMS\SIMS Xfer\ZipFiles unless you already have it set to save to an alternate location on the Schedule tab.

4. To set up a default save location (i.e. a Network drive or Flash drive), go to the Schedule tab>Enter the alternate location in the Backup Path field (i.e. E:\Backups\)>click Save.
